

DATA TRANSFER GRAPHIC

PRINCIPLES

We prefer to work with the program UNIlet.

For further processing of your data in our company, we need all fonts, logos etc. as VECTORS.

Image files and scanned images must be vectorised or digitised in-house before they can be used further.

We have to charge you for this very time-consuming service.

When transferring data from the Mac, please specify the lowest line width, switch off the filling and save the file in "PC mode".

Please also be aware of these points when transferring data from any of the other programmes.

DATA TRANSFER WITH/FROM UNILET

Export possibilities: EPS, DXF, HPGL

Import possibilities: EPS, DXF, HPGL (PGL, PLT)

DATA TRANSFER WITH/FROM CORELDRAW

We always work with the latest versions.

Here, too, logos and fonts must be available as vectors.

DATA TRANSFER WITH/FROM ADOBE ILLUSTRATOR

Please also vectorise all fonts and logos from this application.

DATA TRANSFER FOR DIGITAL PRINTS

Please refer to the DATA TRANSFER DIGITAL PRINTING datasheet for details.
